

DANIEL KORKEVADOS

danikorkevados@gmail.com | 054-356-6686 | Backend Developer Akamai, M.Sc student Data Science

SUMMARY M.Sc. student in Data Science at Ben-Gurion University of the Negev, focusing on GNN research, with a B.Sc. in Data Engineering & Science. Experienced in deep learning, machine learning, data pipelines, and backend development using versatile tools and technologies, currently working as a student Backend Developer at Akamai Technologies.

WORK EXPERIENCE

Backend Developer | Akamai Feb 2026 - current

- Developing POC products in the company’s Architecture team within a large-scale cloud and security environment.
- Worked with **Kubernetes environments** and developed large scale data anonymization processes.
- Developed a **graph-knowledge**-base to serve as a single source of truth for efficient AI agent information retrieval.

Data & ML Engineer | Horizon Capital investment Jul 2025 - Jun 2026

- Developed and executed backtesting frameworks for trading strategies
- implemented and optimized Python/C++ algorithms with a focus on performance, scalability, and reliability.
- Designed and managed PostgreSQL databases and deployed containerized workloads to GCP.

Data & ML Engineer at Tavily, Internship Jan 2025 - Jul 2025

- Analyzed web document access frequency and designed a data tiering strategy. Optimized **Redis** → **MongoDB** migration thresholds to balance latency, scalability, and cloud cost.
- Identified malicious user groups using **machine learning** and **clustering algorithms**. Extracted behavioral patterns to improve abuse detection and platform security.
- Built a Cortex Analyst engine on **Snowflake** enabling natural-language queries. **Text-To-Sql** prompts into optimized **SQL** for analytics and BI use cases.

Platoon Commander | IDF

- Commanded 120 soldiers with full responsibility for operations and logistics.
- Led high-pressure missions requiring critical thinking and teamwork.

B.Sc. final project - focused on applying GNNs to 13F financial data for modeling investor / stock relationships and predicting investment patterns over time.

CivicEase AI - Developing a data platform for processing municipal council protocols using automated pipelines, OCR, and NLP. Transforming unstructured documents into structured, searchable, and analytics-ready data. Enabling scalable querying and insights to support data-driven municipal services. (in development)

EDUCATION **B.Sc. in Data Engineering & Science** 2026 - 2022
Ben Gurion University

- Advanced Programming, Operating Systems, Algorithms, Big Data, Machine Learning, Advanced Machine Learning, Deep learning, NLP, Information Retrieval
- GPA : **88**

SKILLS

• Python , CPP , JavaScript	• llm , transformers	• Linux , Docker , K8S
• SQL , NoSQL	• GCP	• GNN , deep learning
• Machine Learning, Pytorch	• Scikit-learn	• postgres, redisDB, mongoDB
• Data Analysis	• Problem Solving	• ETL / ELT pipelines

LINKEDIN & GIT
